A submersible pump (or sub pump, electric submersible pump (ESP)) is a device which has a hermetically sealed motor close-coupled to the pump body. The whole assembly is submerged in the fluid to be pumped. The main advantage of this type of pump is that it prevents pump cavitation, a problem associated with a high elevation difference between

While most surface pumps are restricted to well depths of 25 feet, and sophisticated jet pump designs reach only about 120 feet, the submersible well water pump allows wells to be drilled 400 feet deep to find good water. The submersible pump can deliver this water to the surface almost as easily as turning on a faucet at the kitchen sink.
