Developments In Theory And
Applied Econometrics

is to provide a general overview of the econometrics of panel data, both from a theoretical and from an applied viewpoint. Since the pioneering papers by Kuh (1959), Mundlak (1961), Hoch (1962), and Balestra and Nerlove (1966), the pooling of cross section and time series data has become an increasingly popular way of quantifying economic relationships.

THE ECONOMETRICS OF PANEL DATA

Application to panel data regression Let ϵ_{it} be the error term of a panel data regression model, with $1 \leq i \leq n$, and $1 \leq t \leq T$. Three different specifications are common: 1.

$\text{Var}(\epsilon_{it}) = \sigma^2$ and all covariances between error terms are zero.

OLS can be applied (no weighting). 2. $\text{Var}(\epsilon_{it})$

$= \sigma^2$ and all
